CLINICAL DEMAND

Two main goals of our team:

Goal 1 : Fundamental biology research

Goal 2 : Drug development and
pharmaceutical industry

SPARROW MEA SYSTEM

MAIN ACTIVITY

- Imec designs and makes breakthrough CMOS-based Multi Electrode Arrays (MEAs).
- By introducing CMOS chip technology in MEAs, imec enables high-quality, high-throughput data acquisition for cell interaction and behavior.
- 16k electrodes with electrodes pitch 15 μm

SYSTEM OVERVIEW

MAIN GOAL

- Develop chips for the study of cells *in vitro*

This is the reason imec fabricated a multi electrode array (MEA) chip

CELL CLUSTERING RESULTS

Cluster plot generated by UltraMegaSort

PRELIMINARY RESULTS

Cluster plot generated by UltraMegaSort

TEAM'S PUBLICATION RESULTS

Frontiers in Neuroscience (h5-index: 70; h5-median: 102) Journal Paper

- **Accepted** in Dec, 2018.
- Beatrice M., Carolina M. Lopez, Erkuden Goikoetxea, Jan Putzeys, Makrina Sekeri, Olga Krylychkina, **Shuo-Wen Chang**, Andrea Firrincieli, Alexandru Andrei, Veerle Reumers, Dries Braeken, "[High-Density Electrical Recording and Impedance Imaging with a Multi-Modal CMOS Multi-Electrode Array Chip](#) "
- Main contribution: Perform CNN to classify the image of microscopy cells image.

The screenshot shows the Frontiers Review Forum interface. At the top, there's a navigation bar with links: HOME, ABOUT, SUBMIT, JOURNALS, RESEARCH TOPICS, and a search icon. On the right, it says 'MY FRONTIERS' with a circular icon, a bar chart icon, and the user name 'SHUO-WEN CHANG' next to a profile icon. Below this is a red banner for 'REVIEW FORUM' with 'Co-author' and a 'Need Help? Contact us' link. A progress bar shows seven steps: 1. Initial Validation (checked), 2. Editorial Assignment (checked), 3. Independent Review (checked), 4. Interactive Review (active), 5. Review Finalized, 6. Final Validation, and 7. Final Decision. The main content area displays the paper title 'High-Density Electrical Recording and Impedance Imaging with a Multi-Modal CMOS Multi-Electrode Array Chip', with 'CMOS Multi-' highlighted in a blue box. Below the title is the author list: Beatrice Miccoli, Carolina Mora Lopez, Erkuden Goikoetxea, Jan Putzeys, Makrina Sekeri, Olga Krylychkina, Shuo-Wen Chang, Andrea Firrincieli, Alexandru Andrei, Veerle Reumers and Dries Braeken. It also states 'Original Research, Front. Neurosci. - Neural Technology', 'Submitted on: 14 Dec 2018, Edited by: Udo Kraushaar', and 'Manuscript ID: 443106'. The research topic is 'Microelectrode Arrays - Monitoring and Manipulating Cells and Networks over Extended Scales at Highest Resolutions'. Keywords include 'Multi-Modal, Impedance imaging, hippocampal neurons, CMOS, high density (HD), Multielectrode array (MEA)'. On the right side of the paper details, there are three icons with links: 'Download latest manuscript', 'View submitted files history', and 'View Invoice'.
